

More than 'POS Software'

The DigiWaiter Point of Sale restaurant software solution consists of 3 products which will:

- Speed up your ordering and picking process
- Structure your stock / prevent out of stock situations

- Gives better insight into your sales
- Decrease error rates

Screenshot XP / Vista Desktop Client Screenshot XP / Vista Server Windows Mobile 5.0 / 6.0 PDA screenshot

The DigiWaiter Solution:

- DigiWaiter Server, set up the menu, stock, categories, etc. Manage transactions, print invoices.
- DigiWaiter Desktop Client, runs on a pc and lets you send order, pick orders, communicate with the server.
- DigiWaiter PDA Client (windows mobile 2003 / WM5), send orders, communicate with the server.

The process of setting up the menu, categories, etc is just so easy. If an item's 'out of stock' it will not appear on the menu. If you (de)select a category on the server you make sure you have 100% control over the menu!

What's the advantage of the DigiWaiter Solution?

You can use your existing hardware, no need to invest thousands of dollars in new hardware just use you own PDA and PC, try it out and let the DigiWaiter Solution convince you!!
