The DigiWaiter Project 2.0 Framework

The DigiWaiter server and the desktop software requires the microsoft .NET 2.0 framework

Get it here! and the 1.1 framework (required by one control, get it here!

The 1.1 and 2.0 framework can both run on one machine and won't bite each other!

The DigiWaiter POS Server 2.0

The DigiWaiter POS Desktop Client 2.0

The DigiWaiter PDA client requires the microsoft .NET 2.0 Compact Framework.

Get it here!

The DigiWaiter POS PDA Client 2.0 Windows Mobile 6.0

The DigiWaiter POS PDA Client 2.0 Windows Mobile 5.0 / Pocket Pc 2002 / 2003

Add. october, 19: please make sure the regional settings of the PDA (date format dd/MM/yyyy or M/D/yyyy) match the server settings.

We noticed that when those two are different it seems like the server's not receiving any orders, the orders however could be found on other dates (orders for september, 1 were found on january 9)!In case you get an 'incomplete file' when downloading which after running the setup file gives a 'not a valid win32 application', as a workaround you might try to go to 'tools -internet options - delete - temporary internet files' and try to download the file again!

Remember to always turn off the powersave function of your PDA, in most cases powersave will disable your wireless connection resulting in an error when activating the PDA...

Note: if you have problems downloading or running the downloaded files please try to delete your temporary internet files (Tools - Internet Options - Delete).
